KEYMACRO can encode multiple macros into one macro sheet, and decode them as needed, if needed. It can handle multiple macros with one keystroke, and also supports Chinese Simplified and Traditional and English as well. FlyAway Website / Blog with Mobile App Last version (v2.5) - Released on Apr-26-2018 Brief Description FlyAway is a software made for users who love to fly. It's web based app was developed with a small team of three developers and features a built in database (with a few dozen thousand rows) and a profile system. FlyAway also has a mobile app that you can download and use. The aim of the project was to create a web based app that was easy to use and looked good. After releasing v1.0 (the first version of the app) a lot of us went back to university, finding that getting any worthwhile programming project done meant that the schedule would get pushed back. This made us realise that no matter how good the app might be (and the app is very good), it just wouldn't get used if it didn't have a mobile app. Even though v1.0 of the website is a bit old now, we are planning to release a mobile app version at some point in the near future. The major changes in the app were the website, the design and all the code. A lot of what the website used to do was moved into the app. This has had a great effect on the load time, as the app is much faster than the website. We have used javascript and ajax to handle everything on the front-end. We have also moved from the Zikula platform to the newer Lithium. It's an amazing platform that we would recommend to anyone, and we are sure to move everything over to it soon. News and Updates This update will mainly focus on the mobile app, as it has been the focus of the project over the last 18 months. The current release (v2.5) will be the last to be released from FlyAway. After this version, we are going to focus on mobile apps with Lithium. We have also changed the logo on the website. The old one was too big, and the new one looks really good. Any suggestions or feedback on the mobile app are welcome. We will be sure to keep the app up to date with 2edc1e01e8

HDR, or High Dynamic Range Photography is an alternative way to capture and showcase more details in an image. A typical image usually has a limited range of light; however, the extreme light and dark areas can actually bring out an image's detail, contrast, and colorfulness. Photomatix Pro is a tool that not only can capture this extra details, but also can merge two or more bracketed shots together to be used in post-production to create HDR images. A variety of sources are supported by Photomatix Pro, such as JPEG, TIF, HDR, EXR, PSD, CRW, NEF, RAF, ORF, DCR, RAW, DNG and others. In this tutorial, we will use the default settings for the first option. For the second option, you need to set the image formats to be processed first. Step 1 Set up the parameters to edit your images. There are several options to do so, namely the color space, white balance, brightness, contrast, sharpness, noise reduction and lens correction. For this tutorial, we will use the default settings. Step 2 Once you are happy with the results, you can choose to merge one or more bracketed shots together. You can also make any necessary modifications to the image alignment. Step 3 Once you are ready, click the OK button to apply the HDR settings to your image. Step 4 Photomatix Pro will merge the bracketed shots to create an HDR image for you to apply to the main window. This will be a TIFF file. Step 5 This is how the final result should look like. Note: For this tutorial, we will use the settings on the left to generate the image on the right. Reviews of "Photomatix Pro" Very easy to use Used for free a few days on my 7D and 14mm lens. It takes away the need for multiple versions of the same shot. Great tool for the money. The developers clearly understood the need for photographers and after working on this product for a number of years, they have done a really good job. I cannot recommend this product enough. Cheers to the team at Photomatix This is a great software to enhance your images. I have used it before with great success. As long as you have some decent quality
