It's a cost-effective and all-in-one system security solution that comes with anti-spyware tools, a firewall, the option to choose trusted and blocked programs. Sleek and simple graphical interface The user interface has a really intuitive design, but the layout seems a bit unusual, with all sections neatly displayed at the side of the main window. It doesn't have an about section or a settings menu, which is quite inconvenient, since it means that you can't get detailed information on the application and you can't make any changes that would apply to the whole application. Use anti-spyware and anti-virus tools The application allows you to scan your whole computer for spyware threats and check the spyware log if you want. You can also

enable the real time spyware and virus protection feature. It has the option to start spyware scan on startup. Moreover, it comes with an anti-virus that would protect you from some of the most common threats on the Internet, but it's not an advanced antivirus program, so it's recommended that you don't rely on it too much.

Firewall protection You can enable firewall protection and check the log to view the activity inside the application. It allows you to create a list with trusted programs that are allowed to run on your computer and one with blocked programs. You can also get anti-spam protection on your email, so it wouldn't be flooded with emails that you're not interested in.

Moreover, it comes with a file shredder that you can use in order to permanently delete certain files from your computer. History cleaner is also available and it has

the option to filter content. All in all, SmartFix Security Center 2008 Crack Free Download is a very useful security solution that you could use on your computer. I have been using this security suite for the last six months and it's a great deal. It doesn't cost me a penny and has prevented me from being a victim of spammers. The main screen shows all the information you would want to know about the computer, from the OS version to the Internet connection information. You can see which anti-virus applications are installed and which programs are selected for the real-time scanning. You can see which programs are currently running and which ones have been stopped. It lets you delete the applications that have stopped. Moreover, it shows the history of all the applications and they allow you to selectively delete

some of them. It has
