You might be wondering what all Elements does to a photograph; after all, you get JPEG 2000, JPEG, TIFF and raw file support. It turns out, the "RAW" mode is what you need for the vast majority of things you most often do with your camera. Many users have been frustrated with macro shots because they feel the software clipping, and the fact that the shots seem "blurry" (due to the lossy nature of JPEG 2000.) But in the real world RAW files are inherently blurry, and you get so much more out of them than you can possibly realize by looking at an image that's been compressed. So, as surprising as the fact might be, you really do need to convert your RAWs to DNG in order for Elements to do what it can do with them. If you want to use a RAW file (and I highly recommend you get a copy of Adobe Lightroom if you find that you're still not satisfied with your photo tool kit right now) Elements offers a number benefit via TIFF support: Last year, a lot of our artists and designers discovered *Sketch*, a brand new app that allows for vector graphics. Of course, many of them loved it so much they upgraded to Corel Paint-er, Adobe Creative Cloud. Here are some responses we've been getting: We now offer an Adobe Creative Cloud subscription so you can always have the latest version of the program on your desktop, laptop or tablet. This includes all versions of the software, at no additional cost. You can also access the latest version of PS CC and CC CS6 from any computer — and you'll still get access to all of the training tutorials on Creative Cloud as well.
