Adobe has also enhanced its Preset Manager. You now access presets for tools such as Burn, Sketch, and Black & White. The Presets also contain rollovers—for example, a preset for Burn 3D--so you can drag and drop them directly to other tools. Dragging and dropping a preset from Lightroom to Photoshop should be pretty familiar to editors. You can create and edit presets through the "Preset" button at the top of the dialog. Adobe is adding a "Presets" button to the Browser, where you can browse presets for Black & White, Levels, Vibrance, and other tools. You can create presets by dragging and dropping tools onto a preset, or by clicking the arrow in the upper-right corner of the tool's panel in the Browser and choosing "New Preset." You can even zoom in on a product you want to use for a preset; just click and hold on it before choosing "Get Back to Fullscreen." In the diagram above, containers were created with the new Content Aware Fill feature of Photoshop. An image with the word "Topaz" in it was created, with a callout helping identify the area to be used for the Content Aware Fill. Files were created with a background image that was a color value of 0 (white), and a foreground image with the word "Topaz" was placed over the background. This creates a silhouette that matches the background to the foreground. The products that follow come from Adobe's stock of photos and videos. I always like finding new work, so I'll start with the ones that caught my eye. Above: A live shot of the crowd for the photo of the Justin Bieber concert shows in Santa Monica. Below: A woman's painted face and a still of her walking across the street are both part of an album of finished videos.

After working with the same basic program for years, you might feel like it's time to upgrade. Fortunately, Adobe Photoshop has occasional deals, making new versions cheaper than ever. Photoshop prices will vary from as low as \$400 to as high as \$700 for the latest release. However, you can currently upgrade to a new version for the discounted price of \$299 from \$640. Depending on what you plan to do with Photoshop, its current prices can make it seem more like a luxury, so it might be just what you need to jump into the future. It's been pretty easy for most people for the last few years—if you want to edit photos, you load them into Photoshop. If your primary tasks include creating movie trailers, building apps, singing like the itchy, scratchy-voiced guy on "Saturday Night Live," or whatever else, you're out of luck. Photoshop is the premiere program, and what happens when Adobe releases a new version like it did with CS4 and CS5? It's done. Stand-alone Premiere Pro CC 2018 (version 15.5.3) handles the editing functions of both film and video; it conducts the same general operations as Premiere Pro as well as the basic functions within AE, including cutting, trimming, compositing, anamorphic scaling, tracking, and color correction. While this pricing is, comparably, a cost with similar software providing alternatives in Apple's Final Cut Pro X (versions 6 through 12) and Adobe's After Effects (versions 14 through 18), it's still a well-priced, powerful software that can double as the only professional video editing and compositing tool you need in a professional environment.

For Linux users, Photoshop version 20 is available as a native package archive, with Linux users able to run the software through Wine (a utility that allows Microsoft Windows-compatible software to run under Unix-like operating systems (macOS and Linux, among others)). "It will still be made available to our Creative Cloud customers, which we think is a great proposition for our customers," Adobe Senior Director of User Interface Jason W. Ellis told Variety. "We haven't changed our overall approach, but we'll be making a variation that is different enough from what we've done in the past that it didn't make sense to go forward with that." The new subscription service would have been the alternative to Creative Cloud. It would have removed some core functionality users of the traditional ad-based business model have come to expect. For example, the price per month for the plan would have cost \$10 per user instead of the \$9 currently charged for a single user. Instead of being billed in annual increments, users would have been billed monthly, which would have been a new approach for the industry. The new subscription system would have allowed for a user to pay for the number of months that Photoshop was used. This is similar to a plan offered by Apple to Apple Music customers, which is known as the per month subscription model. After a trial period, users can sign up for the new Membership plan by clicking the "Subscribe" buttons on their desktop software or the "Sign Up" buttons from within the iOS and Android versions of Photoshop. That means users can upgrade to the new subscription model without missing a beat.
