But if you have complex adjustments that require editing, you'll find yourself navigating through many folders to find the file if it is not in a Catalog. The new Lightroom view does not allow you to quickly navigate to the file you want to edit. You have to select it by clicking on it in the Workspace. The Catalogs, like the one above in Adobe Lightroom 5, are useful for organizing images and working on tasks. You can create as many Catalogs as you need for organizing your files. Each Catalog (like most other types of Layers) can contain a set of pictures (files), Smart Previews, and Custom Metadata. Layers are like folders for your files. Within a given Catalog, for example, you might have one set of files (presumably your first images); throughout the rest of that set of Catalogs, you may have files for images you have edited. To open the Edit window for a Catalog, go to Edit while the catalog is open. In the Edit window, you can open, close, or edit all folders inside a Catalog. This is something you cannot do in the Organizer, however, not without a Catalog.
