You can always fall back on a traditional server company if you ever need to send a really large file quickly. It is just like wiping out an entire file server and replacing it with a new, updated one. Unlike the Apple Cloud or any other cloud-based, remote storage option, you are still sending files to remote servers or backing it up into a locked drive. It's a backup that has to be stored, that can be accessed from anywhere, but is not the best solution for all situations. On the Elements side, Photoshop's best-selling feature is probably its powerful selection tool. With the release of Photoshop CC for the iPad, there was also a Mac version, which tied with Elements as the fastest of the two apps in the Office for iPad suite. But that's changing now. Elements now has an easy Path Selection tool, which is faster and more accurate than Selection by Drag. With the new version, you can now create custom selections with selections that behave more like Live Paint writing. One of the most powerful tools in Photoshop is the Content-Aware Fill feature. This is a feature that tells Photoshop where a face is located in an image, and applies the corresponding color. Now that you can Layer Mask an image to hide parts of it, adorably called the "Blister" tool, the Content-Aware Fill feature has new capabilities to render a still image's content. This is especially handy if you have positioned an image within another image. Now with the Supersonic Filter, you can shoot a picture and have it automatically add a high-quality vignette, rounded corners, and other effects, with just a few pulls of the iPhone's volume buttons. Set your iPhone's volume to one for video, three for portrait, and five for landscape. Do so in Photos, and when you next shoot a picture, you'll have a new type of selfie. You can also use these settings to adjust vignetting in any RAW photo. For more info, like how to use the Supersonic feature, watch this. One of the many new features in Photoshop CC is the ability to shoot stunning HDR images from a range of digital cameras. You can shoot as many shots as you'd like on your iPhone, including five high-quality versions. There is no need to load the shots up separately used for individual edits. You can do all of this from the comfort of your home. After editing, the results can now be exported in a few different formats, so you can get them out to family and friends.

That means you get everything about Elements in one, reduced-cost application. Adobe Photoshop features a built-in gallery, or library, that makes it easy to find, organize, save and share multiple copies of images. It can function on a smartphone with only 16 GB of internal or external storage space. Adobe Photoshop Elements for iPad is also an iPad app that offers a lot of editing and photo editing options. It can work as a stand-alone app that can edit images, create slideshows, composite images, polish photos and more. Those editing options, as well as a new user interface, make this app perfect for photographers. Some of the features in the app will work best in the full version of Adobe Photoshop, so we'll include a set of links out to the full Adobe Photoshop app that you, obviously, can use on your iPad.

On top of the cloud-based Sharing functionality, you'll get a suite of features for image creation, media and audio editing, and more. The new version also has an Automatic HDR technology as well. If you've ever used a previous version of Photoshop, you know that the basic editing tools are what really set it apart from the rest. Thanks to the CC version's updates, the software now offers a number of powerful selection tools. You can now select an object by clicking above, below, around, or inside an area. You can also choose the exact area you want by using a marquee-like tool. Instead of having to select the exact area you want to edit, the software lets you select the object you want and then let you make more precise edits by using the other options. The software has now added a new feature to remove unwanted objects from your images. Simply highlight the area you want to see hide, and click the new "Remove" tool to remove the object from the image.
