The fast–paced innovation and deeper integration across other desktop applications is evident in the new Photoshop CC 2019 (beta). It includes a new adaptive Wide Angle view and new Lens Blur feature, and AviSynth, the industry’s first video and compositing application for images and video, is also available. Alongside these new features, Adobe also announced a new desktop application, Creative Cloud Libraries, to make it easier to save and access layers, blend modes and effects. “Adobe broke new ground in the industry with the launch of Creative Cloud and the Photoshop family three years ago, and we’ve watched Adobe’s technology capabilities explode since then,” said Neville Ray, Chief Creative Office, Adobe. “We’ve made unprecedented leaps in photo editing and use of technology, and the next wave of evolution is powered by Adobe Sensei AI. The combination of these innovations with the new sharing and collaboration capabilities will revolutionize how designers and content creators come together to create and share their work.” In addition, Creative Cloud Libraries brings a wide range of new features. New mobile–first design in Creative Cloud Libraries will help designers work productively across all of their devices, from tablets to laptops, and on small screens from a phone. New Content–Aware Crop technology uses AI to quickly learn and scale images to fill the viewfinder, and a new Random Selection feature can intelligently select from the group of selected assets both with and without the user’s input. Additionally, bounds and length definitions can now be added to the selection without having to scale and re–draw the bounds. Finally, Adobe has added improved handling for assets in adjusted versions, such as web design assets or artboards that have been adjusted at the design phase.
