Adobe switches back to default Retouch panels (Dehaze, Highlight and Shadow, and local adjustments) for post-editing work. I personally love the way you can have multiple versions of your image, even though they may have the latest edition of Lightroom which is considered a plug-in replacement. Get your image straight out of Lightroom to any editing software and back again quickly. Convert your data, just in case. This version weaves together new image fixes and performs some retouch work in Retouch mode. Create a new model (2D array) and see the results immediately. Charts and transformations are available for immediate use; changes appear on the canvas. Merging layers also creates a new 2D array which works the same way. Stitching is done by third-party editors with Photoshop engine support. Meanwhile Adobe also provides a drag and drop menu directly into Lightroom to update images in a hurry; they will update just like it is done by Photoshop. Next steps in the workflow are free: creating an all new document, saving and sharing the image to social sites and e-mail, and finally printing. Chromatic Aberration (CA) imaging does just what its name suggests. It is unwanted color fringing, caused by a minor misalignment of the red, green and blue (RGB) waves when a picture is taken. This is normal, but in some situations the CA distortion may be noticeable. This Filter allows you to draw a rectangle over the area, with any color. Version 2.5 of the popular image editing software "Photoshop" has been released with a great selection of new features.
