Controlling the sharpness of your images in Adobe Photoshop or Adobe Camera Raw is crucial to creating the best possible images. It's a layer calculation, so you can gradually adjust it to create the best possible results. Sharpness can be applied by using the same techniques as you use in the Exposure or Brightness/Darkness sliders. Sharpening also varies from one camera to another. The best way to achieve the best sharpening is to test the sharpening in different areas of the image. You could start by sharpening the focal point of your camera – this is also called the main subject.
